

## MPWC Granulated Activated Carbon Filter Plant – (GAC)

The MPWC, in partnership with the New Jersey Department of Environmental Protection, constructed a 1,650 square foot building at the Marion Avenue Plant that houses three (3) granulated activated carbon filters. Finished water leaves the clear well and is pumped through these filters where the water is “polished” before being entering the distribution system. The NJDEP will be testing and monitoring water quality for currently unregulated properties. For customers of the MPWC, this \$1.6 Million plant was funded by the NJDEP and will further enhance the treatment capabilities at this plant where our water already either meets or exceeds the water quality standards established by the EPA and NJDEP.
